

CHEMIST & DRUGGIST

newsweekly for pharmacy

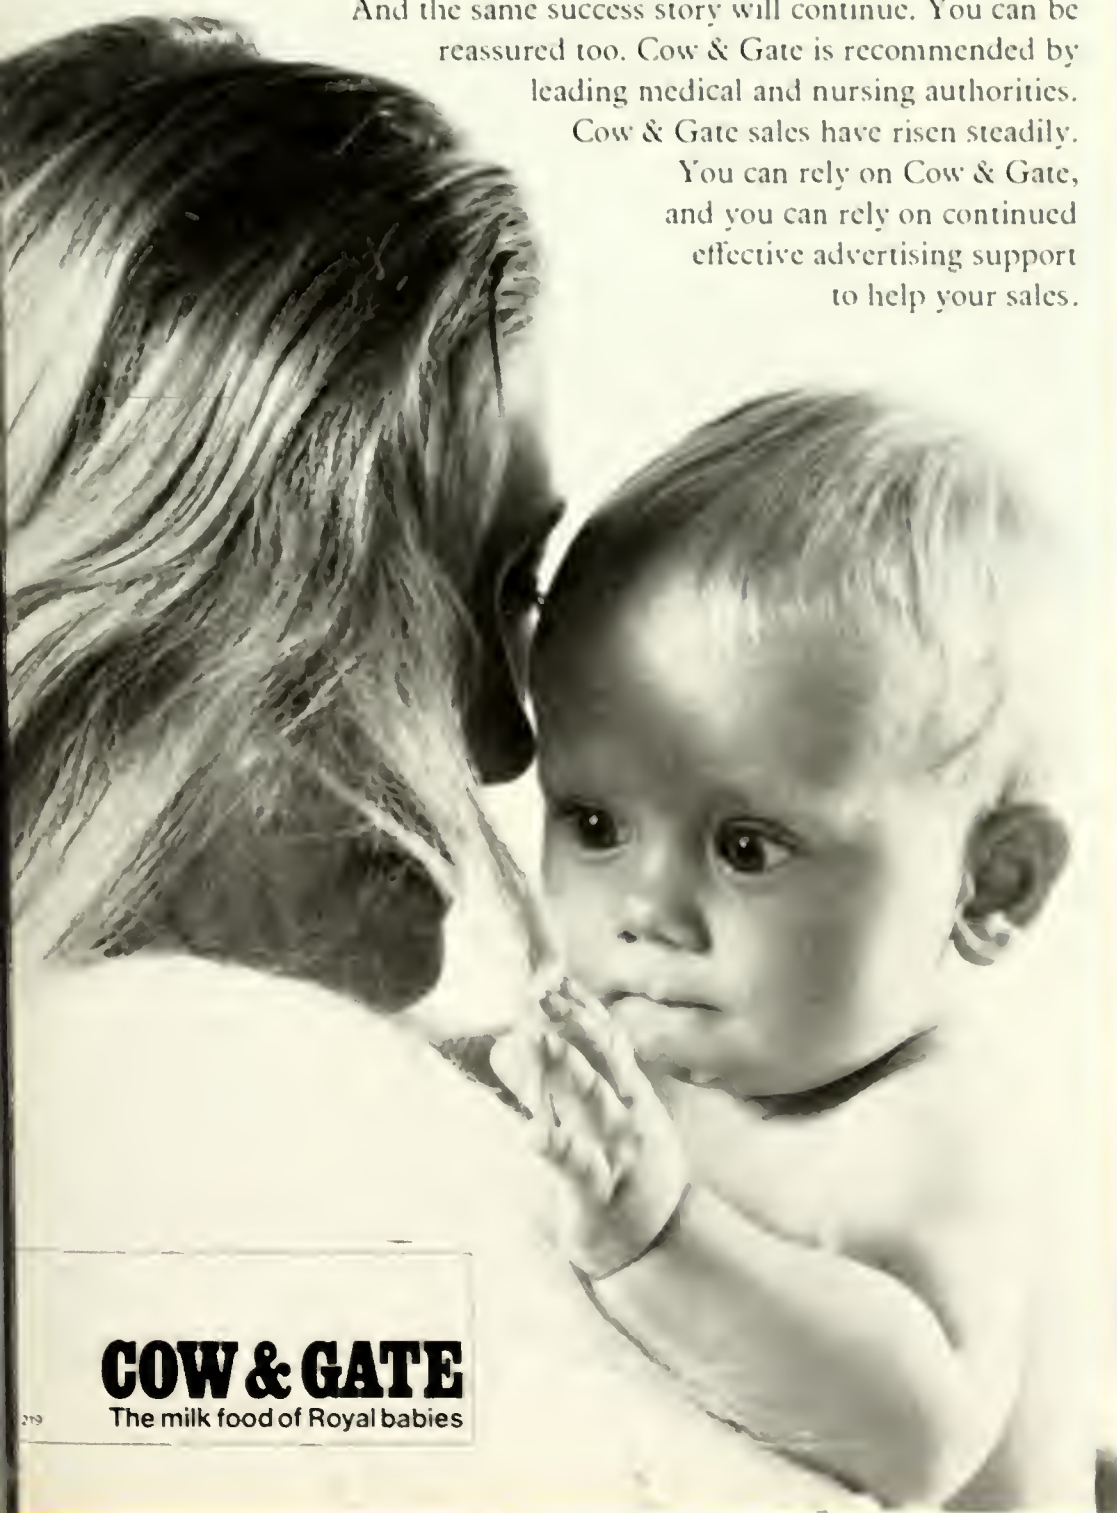

The Cow & Gate story is a success story

Millions of mothers have now seen the Cow & Gate story in women's magazines. It's in the nursing and medical magazines too. This warm, sympathetic advertising will continue, giving mothers confidence, reassuring them of the good, natural effectiveness of Cow & Gate milk foods.

And the same success story will continue. You can be reassured too. Cow & Gate is recommended by leading medical and nursing authorities.

Cow & Gate sales have risen steadily.

You can rely on Cow & Gate, and you can rely on continued effective advertising support to help your sales.

Good Dispensing

Good Business

Both by professional and business standards BERK Economy Brands are the best choice for "open" prescriptions.

All are made with the same care as the specialities upon which our reputation is firmly based, yet prices are remarkably low.

When you need standard preparations to meet "open" prescriptions, the brands named below will give you the best possible value for money, including the assurance of quality upon which our name depends.

Approved Name	Berk Brand Name	Presentation	Packs
Bendroflumazide	BERKOZIDE ®	Tabs 2.5 mg & 5 mg	100 & 1000
Erythromycin	ERYCEN *	Tabs 250 mg	100 & 500
Imipramine	BERKOMINE ®	Tabs 10 mg Tabs 25 mg	250 & 1000 200 & 1000
Nitrofurantoin	BERKFURIN ®	Tabs 50 mg & 100 mg	100 & 1000
Oxytetracycline	BERKMYCEN ®	Tabs & Caps 250 mg Syrup 125 mg/5 ml	100 & 1000 500 ml
Penicillin V	ECONOPEN ® V	Tabs 125 mg & 250 mg	100 & 500
Phenylbutazone	FLEXAZONE ®	Tabs 100 mg Tabs 200 mg	250 & 1000 250
Quinidine sulphate	AURIQUIN *	Tabs 200 mg & 300 mg	100 & 500
Tetracycline	TETRACHEL *	Tabs 250 mg Caps 250 mg Syrup 125 mg/ml	100 & 1000 100 & 500 500 ml

Wasps

A warning

Last year hundreds of chemists ran out of Wasp-eze because there were many more wasps about than anyone expected (as is the case most years!).

Quite a few wholesalers were caught napping too.

Chemists lost sales

Wholesalers lost sales

This year we have organised the E.W.S. — the Emergency Wasp Service. Any retailer having difficulty in getting supplies of Wasp-eze, should send his order direct to us (minimum 1 doz. standard size, $\frac{1}{2}$ doz. large size). It will be dealt with immediately and the goods despatched by return of post.

Wasp-eze (standard) P.1. 1 doz. 44/- no P.T.

Wasp-eze (large) P.1. $\frac{1}{2}$ doz. 33/3d no P.T.

Wasp-eze is equally effective for stings from bees, hornets, horseflies, nettles, jelly-fish and for mosquito bites.

Potter & Clarke Ltd, 9 Wellesley Road,
Croydon, CR9 3LP.
Telephone, 01-688 4135.

Planned service: Ministry to make survey

The Department of Health is to carry out a survey to establish where central finances might develop community services within the NHS.

The Council of the Pharmaceutical Society of Great Britain at its August meeting learned that a letter had been sent to the Department by the Committee on a Planned Pharmaceutical Service asking for clarification of the present situation with regard to the Department's consideration of the Society's report on pharmaceutical services in areas of low population density.

The letter had been submitted to the Secretary of State, Sir Keith Joseph, after the General Election but he had not yet had time to study it in detail. However, the Department had said that it hoped to have developments to report for the October meeting of Council.

The Committee recommended that a letter be sent to the Social Services Secretary, urging that the question of central grants for the establishment and maintenance of pharmaceutical services should be considered as part of the survey.

It was agreed that the next stage of the Committee's work should take as its starting point the provision of pharmaceutical services in areas where health centres and large group medical practices were established. It was accepted that this question could not be considered in isolation from the provision of pharmaceutical services in the wider surrounding areas.

It was agreed to discuss the problem under the following main headings:

□ The case for limitation of NHS dispensing contracts in relation to the development of medical practice from health centres and group practice centres.

□ Factors to be considered in the siting of health centres in an area with particular reference to population distribution.

□ How and under what circumstances pharmacies should be established in health centres.

□ The relationship between the parties in a consortium agreement.

Council meeting report, page 197.

June was a good month for chemists

The volume of sales by chemists and photographic goods retailers was 9 per cent higher in June than in the same month of 1969, according to the Board of Trade's returns.

Co-operatives had the best results, with a 14 per cent increase. Independents were 10 per cent up and the multiples 8 per cent up.

Indices for the month (1965 average = 100) are as follows:

All chemists	127 (+9)
Independents	128 (+10)
Multiples	127 (+8)
Co-operatives	110 (+14)

The figures do not allow for results under the NHS.

Portent from America?

In the space of 20 years the share of the sales of non-prescription medicines in the United States held by chemists has fallen from around 95 per cent to 48 per cent, said the president of A. C. Nielsen Co (Mr A. C. Nielsen jnr) recently.

However, their share was "still a very valuable franchise

— one worth protecting", he added.

Analysing the answers given in a recent survey, it was found that "low prices" was the most important single reason given for selecting one shop instead of another. "Convenience" also featured prominently among the reasons.

For prescription items it seems the public are less discriminating in their search for the "right" store that when buying cosmetics. When buying prescription drugs, 6 per cent mentioned professionalism as a reason for their choice and 4 per cent mentioned the importance of store personnel — "neither point scoring as high as some of us might have anticipated" said Mr Nielsen.

The company estimate that retail drug sales in the United States will almost double their current level to a figure of approximately \$23,300 million and the share done by the chemists shops to 51 per cent.

Statutory committee

The Pharmaceutical Society's Statutory Committee meets at 17 Bloomsbury Square, London WC1 on August 20 to reopen inquiries into six previously-adjourned cases.

The Committee will also consider evidence on six new cases, one relating to the conviction of a member of the Society for offences under the Theft Act, 1968, three concerning members who may have been guilty of misconduct and two concerning members convicted for offences under the Pharmacy and Poisons Act, 1933.

Scholl's refute critic

Criticism of exercise sandals voiced in a letter to the *Lancet* of August 8 and subsequently reported in the news media should not be taken as applying to the Scholl exercise sandal, say the manufacturers, Scholl (Mfg) Co Ltd, 182 St John Street, London EC1.

They point out that the Scholl sandal was designed by an orthopaedic surgeon to help patients who lacked the perseverance to continue with conventional foot exercises.

They were in common use in physiotherapy for several years before being introduced by Scholl for general sale in May 1963.

Scholl state that they will be carrying out even more clinical trials on the sandal. But already they have evidence that many surgeons, matrons and nurses do not subscribe to the *Lancet* correspondent's views.

Fewer razors but more blade sales

By volume, sales of complete safety razor sets were down by 15 per cent in the second quarter of the year compared with the same quarter in 1969. However, sales of stainless steel blades sold separately showed a total rise of 15 per cent, or 8 per cent by value, due to larger export sales which were up by 30 per cent and 14 per cent respectively. Those details are given in the Board of Trade's *Business Monitor*.

Two Boots branches were the locations for special Yardley promotions featuring BRM racing cars recently. Yardley are sponsoring the BRM Formula 1 team in this season's Grand Prix series. The Boots stores involved were at Royal Exchange, Manchester (where the picture above was taken) and at Broadmead, Bristol. The cars formed the centre of a display

Chemists get a warning against 'complacency'

National Health Service receipts accounting for over 33 per cent of chemists' turnover are leading to over-complacency in this sector of the retail trade: they act as a buffer against the competitive forces of the High Street, states a recent report in the Economist Intelligence Unit's *Retail Business*.

Supermarkets and variety and chain stores continue to make inroads into the chemists' traditional lines—toiletries and cosmetics. "Little wonder that the numbers of chemists have been decreasing as the full effect of competition without retaliation begins to make itself felt." Chemists in fact appear to have lost business in volume terms last year, and there is more than a little danger of the independent chemist slowly disappearing from the High Street to a much more restricted role, the report adds.

Chemists' total receipts in 1969 were estimated at £502m, an increase of 4½ per cent on 1968; counter sales were estimated to be up by 3 per cent at £322m.

In 1969 chemists and photographic shops accounted for 3.1 per cent of total retail turnover (same as at the 1966 Census of Distribution). Independents' counter sales exceeded £200 m for the first time, showing the average 4 per cent rise when figures included photographic dealers.

Multiples' sales were £176 m (up 4 per cent) and represented 44 per cent of the total turnover achieved by only 15 per cent of the number of outlets.

"If present trends continue," says the report, "the multiples will have caught up with the independents before the end of the 1970s in terms of turnover."

As far as the present year is concerned, it has got off to a poorer start than 1969. There are grounds, says the report, for believing that the situation will not deteriorate in the second half as it did in 1969. Recent wage rises should keep up spending on items like toiletries while continuing price rises keep up turnover.

Forecast of sales by chemists and photographic dealers.

	1968	1969	1970
	£m	£m	£m
Independents	196	204	213
Multiples	170	176	185
Co-operatives	22	22	23
Total	388	402	421

Amalgamation of services in hospital group

Arrangements have been made to appoint a group chief pharmacist responsible for amalgamation of pharmaceutical services at the new East Cheshire group of public hospitals, in the Macclesfield area.

He will also be responsible for possible merging of similar services of Cranage Hall group and South Cheshire group when the big general hospital being built at Leighton by Crewe, southern Cheshire, is completed.

Training levy to be kept down

While continuing its established practice of involving member firms in policy formation, the Chemical and Allied Products Industry Training Board (CITB) in its annual report records greater selectivity in grant aid, which arises from its policy to reduce levy progres-

sively, and makes proposals to evaluate the effectiveness of its policy by an independent survey in 1971.

Early indications point to a considerable rise in the average recovery of grant on levy for the period January-July, 1969, and as a result ceilings have been introduced to avoid escalation of the levy.

The report says that training is not just a matter of sending people away on courses, and that from management to the shop floor, most training is on-the-job.

Of the 455,000 employees in the industry for whom statutory returns were made to the CITB, 68,000 are associated with pharmaceuticals and 28,000 with cosmetics, perfumes, aerosols, etc.

(Annual report, Chemical and Allied Products Industry Training Board, HM Stationery Office, price 4s.)

Porfiromycin judgment

The House of Lords (Lords Reid, Wilberforce, Morris of Borth-y-Gest, Diplock and Guest) reserved judgment recently on the appeal of American Cyanamid Co against the judgment of Mr Justice Graham revoking their patent for the manufacture of porfiromycin on the petition of Upjohn Co. It was the first appeal under the provisions of section 12 of the Administration of Justice Act 1969 which enables an appellant to by-pass the Court of Appeal and proceed from the High Court to the House of Lords.

Approved for farmers

The Ministry of Agriculture, Fisheries and Food has issued the following first list of additions to the 1970 list of Approved Products for Farmers and Growers, in accordance with the Agricultural Chemicals Approval Scheme:

Fenazafflor, new type of acaricide for the control of active stages and summer eggs of fruit tree red spider mite on apples; wettable powders, Lovozal 40 (Fisons).

Fenitrothion, organophosphorus insecticide for the control of codling, tortrix and winter moths, aphids, blossom weevil, capsids and sucker on apples, pea moth and (by making a bran bait) leather-jackets in cereals; liquid formulations, Accothion (Cyanamid) and Boots Fenitrothion Insecticide (not peas) (Boots).

Thiometon, systemic organophosphorus insecticide for the control of aphids on sugar beet and potatoes; dusts, Chafer "Dry Spray" Ekatin (Chafer).

New Approved Uses

Chlorbromuron: For weed control in carrots and parsnips.

Chlormequat: For reduction of straw length in oats.

Dichlorvos: For pre-blossom use on apples and pears (for the control of aphids, sucker, tortrix and winter moths).

Dimexan: For use on carrots to reduce growth and splitting.

Mancozeb with Zineb: For the control of tulip fire, rust of carnations and geraniums, and ray blight of chrysanthemums.

Cycocel (chlormequat) and RCR Slug Pellets (metaldehyde) are new products containing approved chemicals.

Estate plans a dispensing service

Residents of the Headstone Lane Estate in Harrow, Middlesex, bereft of their only pharmacy since the beginning of the month, called a meeting last week to decide ways of helping elderly patients to obtain their medicines.

The meeting, attended by the local Member of Parliament, borough councillors, doctors and pharmacists, set up an executive committee of five to look into the practicability of various suggestions made.

As an interim measure it was hoped that the prescriptions might be collected from the doctors by a voluntary organisation and taken to a chemist of the patients' choice for dispensing.

In the longer term, the possibility of the vacated premises of the National Co-operative Chemists Ltd in Long Elmes being sublet to another chemist was also to be examined.

A local retail pharmacist, Mr D. Beck, said if the lease could be arranged he would consider opening a branch pharmacy there.

Seminar on new dressing

Fourteen overseas senior sales managers are attending a seminar this week at Roussel's Wembley Park head office on Soframycin Unitulle—the new form of single-pack antibiotic tulle dressing, prior to the launch of the product worldwide.

This new development provides a clinical facility which ensures complete sterility up to the moment of use; each unit of 10 cm by 10 cm is sealed under sterile laboratory conditions and packed in cartons of ten.

The seminar is being held with a background of worldwide medical evaluation, and the various aspects of clinical application overseas are being dealt with in depth by Roussel's medical team headed by Dr J. P. W. Young and sales director Mr J. T. Hook.

Import deposit rates to be cut

The rate for import deposits is to be reduced from 30 per cent to 20 per cent on September 1 and the deposit scheme will come to an end in December.

Scholl Exercise Sandals

A physiotherapist wrote recently to "The Lancet" suggesting that Exercise Sandals could be harmful to the feet. In publishing the letter "The Lancet" accepted no responsibility for the views of its correspondent.

Understandably the press, radio and TV picked up the item and exploited its news value although they were careful not to publicise the precise terms of the allegation since these do not bear serious investigation.

We categorically state therefore, that the Scholl Exercise Sandal is designed specifically to straighten the toes – to strengthen the foot arches – to promote natural foot movement – to improve foot balance and to tone the muscles of feet and legs.

Scholl Exercise Sandals from their inception were medically and orthopaedically approved and for more than ten years have been worn and recommended by medical staff in Physiotherapy Departments and Operating Theatres in Hospitals throughout the world.

During the same period of time over five million pairs of Scholl Exercise Sandals have been sold through Chemists and the high level of repeat purchases indicate the satisfaction they give.

The Scholl name is synonymous with Care of the Feet and the Scholl Exercise Sandal is consistent with this principle.

She can't help selling Polyherb

She's only 6/9 and she's a beautiful new offer with every bottle of Polyherb shampoo. Twelve inches tall, specially made for Poly by Pedigree, she'll appeal to women as a wonderful idea for Christmas, and her long silky hair and lifelike eyes will enchant any little girl.

For extra attraction, there's a competition for the best-dressed doll, with a special section for the under fourteens. We're giving away 27 valuable Singer sewing machines, and the winning dolls will go to charity.

It's an exciting offer packed with appeal for all ages. Get your stocks of Polyherb shampoo ready now and let Poly's dolly sell them for you.

NEWS IN BRIEF

□ Subject to Governmental approval, the pharmacy at Bolton Royal Infirmary, Lanes, was to be extended at a cost of £21,893, noted minutes of Manchester Regional Hospital Board recently.

□ The Distributive Industry Training Board is to give backing to a country-wide decimalisation training programme to be organised in the autumn by the National Chamber of Trade. The DITB has agreed to help towards the costs of advertising the meetings, booking accommodation, and tutors' fees.

□ The Bolivian Government has reconstructed its technical qualification committee and charged it to draw up a list of home and imported pharmaceuticals in order to determine whether they are similar or not and to study the effect of allowing or prohibiting their importation.

□ Regulations have been made which will remove ponceau MX from the list of colouring matters permitted in food with effect from January 1, 1971. Regulations made will remove brominated edible vegetable oils from the list of emulsifiers and stabilisers permitted in food with effect from September 1, 1970.

□ Twenty-five leading Japanese pharmaceutical companies have decided to establish in Tokyo a pharmaceutical technology information centre by the end of the year in an attempt to streamline their business and to promote mutual co-operation. The centre will analyse and evaluate technical data collected from all over the world and distribute its finding to its members.

PEOPLE

Mr V. H. Blaney, who has been with Phillips Laboratories (previously Phillips, Scott Turner Co) for over 47 years — 36 travelling in North and mid Wales area and adjoining counties — retired last month.

Professor E. J. Shellard, Department of Pharmacy, Chelsea College of Science and Technology, has published a survey of research done by British pharmacognosists during the years from 1950 to 1969.

Deaths

Coutts: Recently, Mr Charles Dewar Coutts, MPS, 64 Braeside Terrace, Aberdeen, aged 49, Mr Coutts qualified in 1943 and followed his father and grandfather into the business of Charles Coutts (Chemists) Ltd, 2 Schoolhill, Aberdeen, which was founded in 1852.

Lattimer: On August 10, Mr Hugh Lattimer, 62 Woodcote Hurst, Epsom, Surrey, aged 88, Mr Lattimer had served the drug and essential oil trades for over 70 years. He entered hospital recently for the amputation of a leg (C&D July 4, page 10).

The Xrayser column

Naming the medicine

The field of discussion appears to be widening on the subject of the labelling of dispensed medicines. It appears that the publication *Which?* has now entered the lists and is advising the patient to ask the doctor to write the letters NP on the prescription. That, in turn, we are told by the publication, should make the chemist put the name of the medicine on the label (last week, page 149). Your report goes on to say that the advice is given to a member of the Consumer Association who had complained that different tablets received by him and his wife were almost identical, yet were dispensed in bottles which said merely "use as directed."

I indicated recently in this column that I thought there was more to be said in favour of automatic labelling than against it, but I pointed out that meantime the simple addition by the doctor of two letters to the prescription would procure the desired result.

But there are one or two points in the report which seem to call for elucidation. Firstly, it seems a strange procedure for the member of the Consumer Association to have taken his complaint to that organisation, and not to have discussed it with the prescriber or the pharmacist. I am not even satisfied that naming the tablets concerned would necessarily provide him with the answer.

If, instead of "use as directed," there had been a direction as to dosage and frequency, that still might not have answered the consumer's problem, for both might easily have been "one three times daily." But surely the label would differentiate between man and wife by the prefix? One would expect the patient to use sufficient care to see that he had lifted his own tablets, and not those of his wife.

When found, make a note of

A week or two ago I commented on the decision of the Council of the Pharmaceutical Society to make recordings of prominent pharmaceutical personalities, and I allowed myself to wonder if the interviews must be confined to the prominent. The thought occurred to me again on reading that fascinating little publication, *Pharmaceutical Historian*, the newsletter of the British Society for the History of Pharmacy. It is reported that at the annual meeting of members, Mr S. J. Woodward said that he would like history to include topics nearer the present era, suggesting that perhaps the distant past had had more than its fair share. He would like, he said, to have the second half of the nineteenth century considered, and of course he is right. History is always in the making, and we are close enough to the period Mr Woodward mentions for many senior pharmacists of today to have known and listened to those who practised at that time. We are fortunate, also, in having that period well documented through the pages of the bound volumes of the *Chemist and Druggist* and the Society's Journal. And if you, intent on research, want to know what constituted the burning issue of any particular time, turn to the correspondence columns.

A treasury

It is indeed fascinating to read other items in those early publications. On one occasion there appeared to be an extremely erudite discussion on sewage and in later pages of the same issue essential oils were given some prominence. However, I prefer when relaxing, to meander through the historical reviews that appeared in those annual special issues of the C&D, many of which I still treasure.

The fount of history

It has been said that the fount of history is the club bore. That may be a little unkind, but there are grains of truth to be found among the chaff, and winnowing may produce its reward. It may be that there is some affinity between the club bore, Jack Point, and the writer of this column.

COMPANY NEWS

Upsurge of profits at Macarthys

Macarthys Pharmaceuticals Ltd show group profits before taxation for the year ended April 30 of £401,041 (against £150,306 for the previous year). The amount provided for tax was £187,502 (£62,314) and a final dividend of 9 per cent (nil) is being recommended making a total for the year of 15 per cent (6 per cent).

The figures exclude an amount of £46,569, which has been charged to reserves (1969—£19,199) after deducting corporation tax. This figure is made up of three items: Costs on property awaiting disposal, Cooper Brothers consultancy fees, and compensation paid to a director.

Macarthys' directors say that their wholesale companies have successfully instituted new systems that have resulted in a sharp return to profitability. The manufacturing and retail companies have made policy changes which have resulted in them experiencing a set-back in profits, but which have been designed to provide a firm base for the future.

Parke, Davis in merger talks

A statement issued by Parke, Davis & Co in the United States says that the board has agreed in principle to a merger with Warner-Lambert Pharmaceutical Co and that a "competing proposal of Revlon Inc was considered and rejected."

Should the shareholders of both companies agree to the merger it was emphasised that Parke, Davis would keep its own identity and management.

Commenting on the announcement *Business Week* said:

"It may be hard to find a partner quite as neatly suited as Warner Lambert is to Parke, Davis. The proposed combination of these two will make a package with sales of more than £1,000 million. Parke, Davis is debt free, its working capital is still more than \$100 m but it has had to cut both research and development and white-collar personnel to save cash; earnings, which as late as 1965 were \$32.6 m, fell to \$20.7 m last year, and just last month the company reported a 24 per cent drop in its second-quarter profit for 1970."

S & N and Gala link

The boards of Smith & Nephew Associated Companies Ltd and Gala Cosmetic Group Ltd have proposed to merge the toiletry and cosmetic interests of Smith & Nephew with those of Gala.

Under the terms of the merger Smith & Nephew will acquire a 55 per cent holding in Gala with Gala benefiting from the manufacture and profits of the Nivea range of products in the United Kingdom and export markets.

If the arrangement is agreed there will be an interchange of senior executives and directors. Mr S. N. Steen (chairman S & N) would become chairman of Gala and Mr S. H. Picker (currently Gala chairman) would be appointed joint deputy chairman of S & N with Mr C. W. Crouch.

Smith & Nephew Associated Companies Ltd have declared an interim dividend of 6.75 per cent (equivalent in 1969 was 6.21 per cent). Pre-tax profit for the 24 weeks ended June 20 was £3,262,000 (£2,959,000) from sales 14.6 per cent up at £21.55 m. —Mr W. Finney, Mr D. E. Morgan and Mr E. H. Peet have joined the board of the subsidiary company Southalls (Birmingham) Ltd. Mr J. G. M. O'Sullivan and Mr D. Wilkinson have been appointed directors of the sales subsidiary company, Lilia-White Sales Ltd.

In brief

I. S. Burt & Partners and Howe & Hammond Ltd are merging on October 1 to form a new company, which will be known as Howe & Hammond Ltd and will have the following directors: C. V. Hammond, MPS, ARIC (chairman), N. W. C. Clutterbuck, MPS, J. Collins, MPS, and I. S. Burt, B.Pharm, MPS. The head office is at 75 South Street, Bishop's Stortford, Herts and the company will continue to trade through the four existing pharmacies: Abbotts Pharmacy, Stanstead Abbotts; Hockerill Pharmacy, Bishop's Stortford; Mount Pharmacy, Stanstead; and Trinity Pharmacy, Bishop's Stortford.

Gland Supplies Ltd, Manchester, have opened a 14,000-sq ft factory on the Hutton Lyons Industrial Estate, at Hutton-le-Hole, co Durham. Mr A. Johnson, a director, said that previously the animal by-products collected in the North-east had been transported to Manchester for processing.

Du Pont Co have announced plans for the construction of the world's largest plant to manufacture polyvinyl alcohol at their present manufacturing site at La Porte, Texas/USA.

Mr J. M. Horsburgh, MPS, 274 Canongate, Edinburgh, has acquired the pharmacy of Mr J. T. Deans, MPS, 4 Stenhouse Cross, Edinburgh 11, as from August 30. The Canongate premises will then be closed due to road developments in the area. Mr Deans will be retiring.

BATC's cosmetic interests: Group turnover of British-American Tobacco Co Ltd in the half-year ended March 31, included £22.32m from the perfumery and cosmetics interests.

Gnome Photographic Products Ltd: Profit for the year ended May 31 was £100,702 against £149,259 in the previous year, before tax of £44,793 (£67,000). Dividend is cut from the equivalent of 27.3 per cent to 20 per cent.

Wellcome Foundation's next chairman: Mr A. A. Gray, MC, MA, BSc, at present a deputy chairman of the Wellcome Foundation Ltd, has been elected to succeed to the chairmanship on the retirement of Sir Michael Perrin, CBE, on December 31.

Appointments

Schering Chemicals Ltd have appointed Mr R. G. Carter, MPS, their sales manager. Mr Carter joined the company in 1957 as a medical representative for East Anglia, became area manager two years

Mr R. G. Carter

Mr C. Eaglen

later and in 1961 was appointed medical information officer, then training officer and in 1964, field sales manager.

Mr Clarence Eaglen becomes field sales manager and Bill Crothers, assistant field sales manager.

Warner-Lambert International have established two "hemisphere management groups." The Eastern hemisphere group, based at Slough, covers all of Europe, Africa and the Indian sub-continent. Mr R. F. Rudgley, MPS, for five years based at the Warner-Hudnut-Lambert Laboratories, Eastleigh, has been promoted to take over as director, professional products at Slough.

Gerhardt-Penick Ltd announce the appointments of Mr Peter Tyler (sales manager, consumer products division); Mr John Archer (sales administration executive consumer products division); Mr John Dunning (export manager) and Mr Montague Miller (chemical sales manager).

Radiol Chemicals Ltd have appointed Mr D. Alderson their representative to cover the South Anglian counties and Mr C. D. Brough to represent them in North Lancashire, Cumberland, Westmorland, Durham and Northumberland.

Leo Laboratories Ltd, have appointed Mr T. E. Summers their sales manager. He was formerly the training and development manager of the company and he has been succeeded in this position by Mr W. T. Shanks.

Remington electric shaver division, Sperry Rand Ltd, have appointed Mr Simon B. Lloyd their marketing manager with overall control of sales, advertising and marketing. Aged 40, Mr Lloyd has served the division for nine years, initially as advertising manager for six years and latterly as general sales manager.

GEIGY

SYMMETREL

SYMMETREL®

In the past few months, considerable interest has been shown in the introduction of new treatments for Parkinson's disease. One of these, Symmetrel (1-Amantadine hydrochloride), will measurably improve such factors as functional disability, tremor, limb

dexterity, timing of walking and writing, speech and mood.

Treatment with Symmetrel does not require hospital supervision and it is freely available for prescribing in General Practice.

NEW PRODUCTS AND PACKS

Diagnostics

Test for bacteriuria

Uriglox is a specific and sensitive test for bacteriuria from William R. Warner & Co Ltd. It yields a result within 10 minutes.

Uriglow consists of an ion exchange paper which is placed in the urine to be tested. If 1.5 to 2mg/100ml or more of glucose is present the colour reagent will give a blue-green reaction, a clear sign that a symptomatic bacteriuria is not present.

If the colour reagent part remains unchanged it is a warning sign that bacteriuria is present.

Uriglox is issued in tins containing 10 strips with sample tubes (48s 4d). (General Diagnostic Division, William R. Warner & Co Ltd, Eastleigh, Hampshire.)

In disposable syringes

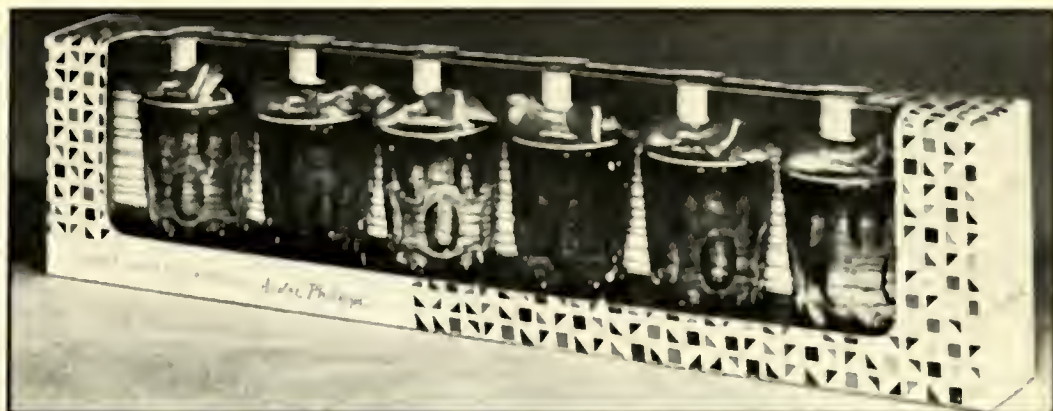

The Radiochemical Centre can now supply xenon-133 injection in syringe units. The product has been designed to give the user 10 mCi ¹³³Xe in 1 ml saline solution in a form that, with the minimum of handling, can be injected into a patient as a single dose. Each unit comprises a glass injection cartridge containing a sterile saline solution of xenon-133 within a transparent plastic tube which is packed in a lead shielding container. The associated sterile syringe components are inside a transparent plastic bag. There are also instructions for assembly immediately prior to injection.

NAS 21P is despatched each Friday and dated for the following Monday; orders should be received by the Tuesday preceding despatch. (United Kingdom Atomic Energy Authority, Amersham, Buckinghamshire.)

Cosmetics and toiletries

Coty Originals lipsticks

Coty are introducing 12 new lipsticks (13s 9d) in up-to-date colours. The lipsticks come in tortoiseshell finished cases and are specially shaped to give the mouth a perfect outline which will not bleed or feather. There are six cream colours and six frosted. The "creams" are:—

Beau Pink, cerise pink; Pretty Plum, ice blue pink; Melonie, flame orange; Real Orange, sunset orange; Tomato Red, morning rose; Sure Strawberry, lobster coral. The frosted range includes Sunny Pink, silver pink; Marygold, soft gleaming coral, Honeypot, golden beige; Cinnamon Sugar, bronzed beige; Toffee Beige, petal pink beige and Newpenny Red a rust red. (Coty (England) Ltd, Great West Road, Brentford, Middlesex.)

Aqua Manda herbal shampoo

A herbal shampoo (1s 5d) has been added to the Aqua Manda range. The shampoo is packed in a foil sachet, 24 in each display outer. (D. R. Collins Ltd, Badminton Court, Amersham, Bucks.)

Gilty rose and glassy peach

Two new shades of lipstick (20s 5d) with matching Gel-Rouge (35s) have been added to the Germaine Monteil range of fashion cosmetics—Gilty Rose and Glassy Peach. (Germaine Monteil (UK) Ltd, 17 Old Bond Street, London W1.)

Gypsy lips

Names from gypsy folklore have been adopted by Helena Rubinstein for their four new lipstick shades (12s). They are Sinti Pink, Romany Flame, Taro Magic and Gitano Peach. (Helena Rubinstein, 3 Grafton Street, London W1.)

In dimple bottles

Continuing their policy of adopting distinctive bottles, Andre Philippe are issuing a cocktail bubble bath gift set (13s 9d) containing six tapered round dimple bottles. On the neck of each is an elegant bow. There are six cocktail sets in an outer. (Andre Philippe Ltd, 71 Gowan Avenue, Fulham, London SW6.)

Love by Outdoor Girl

A new range of preparations has been introduced by Outdoor Girl, under the title Love. The fragrance is described as having "a rich, exuberant, jasmin-woody note that lasts." The range includes skin perfume 40 cc (9s 10d), bubble bath (7s 3d), body lotion (5s 5d) and talcum

(5s 5d). (Myram Picker Ltd, Hook Rise, Kingston By-pass, Surbiton, Surrey.)

Sundries

Aerosol polish

Mr Sheen is a new household concept, launched by the Reckitt & Colman Household Division. It is an aerosol polish that cleans a wide variety of surfaces. Extensive point-of-sale materials are available in red, gold, white and black (Reckitt & Colman, Household Division, Danson Lane, Hull HU8 7DS.)

Holdalls in carrier packs

Solport are offering an excellent range of holdalls in striped, WGC 890, and floral, WGC 947, PVC (14s 6d). The holdalls are packed in gold carrier packs with a window that enables them to be readily examined by customers. Another holdall, WXC 968, (9s 11d) is wrapped in cellophane. It is in floral patterned PVC and has welded seams (Solport Brothers Ltd, Portia House, Goring Street, Goring-by-Sea, Sussex.)

Ear protector

The Billesholm ear protector is a glass-down felt cut into strips. The glass down is composed of glass fibres having diameters one tenth that of cotton. About 1in of the felt is formed into a cone shape and inserted in the ear.

The manufacturers state that when Billesholm ear protectors are used a weaving mill sounds no louder than a busy street and a rivetting hammer no louder than a paper machine. Besides a bulk delivery unit for factories there is a portion package containing 3 g (2s 9d), a "special" containing 48 x 3g packages and a dispensing package that contains 60 g of down in a creased slip. (Distributors: Ardente Industrial Services, 3 Thames Avenue, Windsor, Berks.)

TRADE NEWS

P D & Co's 'drugs' in Securitainers

Parke, Davis, Staines Road, Hounslow, Middlesex, have recently begun to pack their 60 dry products (tablets, capsules, Kapseals, pills and powders) in white Securitainers. These polypropylene cans have the advantage of light weight, resistance to breakage and varying conditions of light, heat and humidity, with a pilfer-proof tear-off strip device on the low density polyethylene cap.

The opportunity has been taken to reduce the range of pack sizes from 32 to only 9, carried in 11 sizes of outer container to pack into a single size shipping outer. This standardisation will assist the automation of the filling lines, and reduce

Bencard, Beecham House, Great West Road, Brentford, Middlesex.

Reformulation

Dista Products Ltd, Fleming Road, Speke, Liverpool, announce the reformulation of Orastrep suspension and tablets. In keeping with current medical opinion, sulphadimidine will be excluded from the formulation.

The new formulation is effective from batch numbers A14512 Orastrep 25 tablets; A17059 100 tablets, and A17060 500 tablets; A16941 Orastrep 50 ml suspension, and A16939 500 ml suspension. Packs and prices remain unchanged.

From raw material to finished pack

Following the expansion of Butler Pharmaceuticals into the premises at 5-19 Brunswick Street, Leicester, formerly occupied by the wholesale assembly division, facilities available for the handling of tablets and liquids now include formulation, manufacture, printing and packaging.

Inquiries are invited for both large and small runs. A national delivery service by Butler Pharmaceuticals' own transport aids prompt delivery.

Bank holiday closing

Beecham Ethical Distributors, Great West Road, Brentford, Middlesex, closing 5.15 pm Friday, August 28, until 9 am, Tuesday, September 1.

Bonus offers

Pharmaceutical Specialities (May & Baker) Ltd. Anthical cream 25g, Anthisan cream 25g and Avomine tablets 10 invoiced as 9 (until August 31).

PROMOTIONS

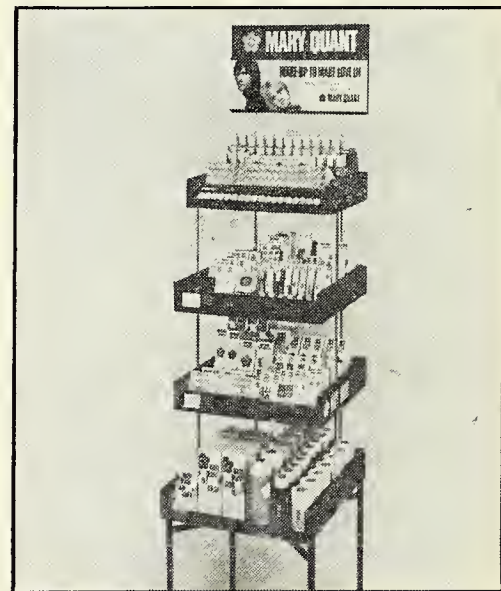

New Wilkinson Sword promotion

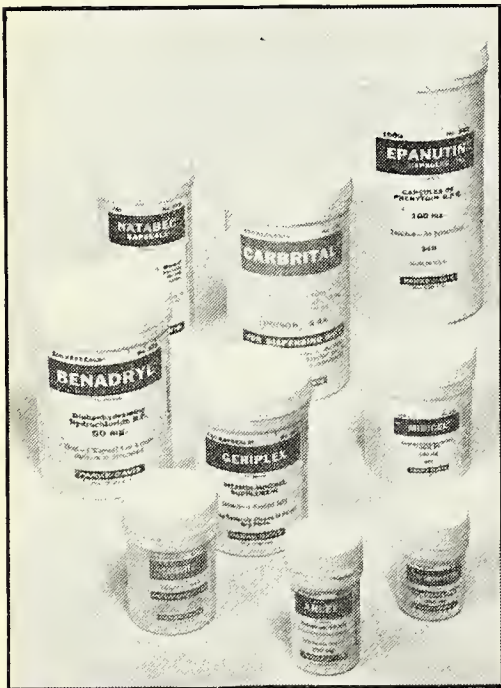

In a new consumer promotion by Wilkinson Sword, customers buying New Wilkinson Sword razor blades, razor or shaving soap will be able to send for three attractively framed watercolour military prints at a special price of 12s 6d each.

The prints, full colour pictures on a white oval against a grey background, are attractively presented in 7½ x 5½ in black and gold frames. They show an officer of the Yorkshire Hussars in the uniform of 1897, a field officer of the 94th Foot in 1824, and a Royal Artillery Company sergeant in 1846. They are obtained singly, or in sets, by completing a coupon in a leaflet available at point-of-sale. The offer is open until January 31 1971.

Specially designed point-of-sale material featuring the prints includes display boxes, showcards, leaflet holders and window stickers.

This free-standing unit holds the entire range of Mary Quant cosmetics and testers. Black trays offset the white packs and self-adhesive price strips provide easy reference. Top area available for interchangeable promotion cards. (Mary Quant Cosmetics Ltd, Surbiton, Surrey.)

the problems of storage for wholesaler and retailer.

Illustration shows the range of nine Securitainers, which are being introduced to home and overseas markets as stocks of existing packs become exhausted.

Hay fever vaccines

Bencard state that Haygen is to be deleted from their range of hay fever vaccines when existing stocks are exhausted. The short-course Bencard grass pollen vaccines, D-VAC Pollens and Alavac-P, are recommended as alternatives to Haygen but, in cases requiring a closer substitute for Haygen, specially formulated Specific Desensitising Vaccine (SDV) will be prepared to individual order.

Further information is available from:

NEW Steedman's Nappy Cream

**doubly effective
against nappy rash**

Steedman's is a sophisticated formula designed to treat *and* prevent nappy rash.

Treatment Extensive hospital trials have shown that the Steedman's formula, based on 0.5% Cetyl Pyridinium Chloride, is highly effective in clearing up existing cases.

Prevention Steedman's siliconised base forms a physical barrier which prevents urine getting through to the skin and stops chafing. The C.P.C inhibits the development of ammonia-forming bacteria.

High frequency advertising to carefully selected audiences in Woman, Mother, Family Circle and the leading mother-interest magazines starts September. Supported by massive sampling.

Presentation 55g tube in an attractive one dozen display. Recommended retail price 4/-.

Generous introductory bonus available from your Scott & Bowne representative now.

Steedman's Nappy Cream

Gentle protection – clinically tested.

John Steedman & Co. 50 Upper Brook St. London W.1

SELF-SERVICE SPEARHEAD

To match the supermarkets at their own game, but to remain unmistakably "chemists": that summarises the philosophy behind the new self-service units being opened by R. Weston (Chemists) Ltd.

Anyone who doubts the practicability of combining the two objects might well be prompted to think again after a visit to the first of the chain, which opened in the Merseyway shopping precinct in Stockport, Cheshire, last Friday (*C&D* last week, page 153).

In a sense, this can be described as a "pilot" unit, in that it is slightly smaller than most of its successors will be—it has a 24-ft frontage and a sales-plus-dispensary area of about 1,700 sq ft, while subsequent openings already planned have frontages of 36-ft-plus and sales areas upwards of 2,000 sq ft.

But already the pattern is clear. The pharmaceutical character is established beyond question from the outset. The fascia displays the word "chemist" prominently, and, immediately on entering the shop the customer's eye will be

drawn to the twin illuminated signs at the far end: "medicines" and "prescriptions."

Below these signs are the only two sections where self-service does not apply. How the orthodox sale of medicines can be grafted on to a self-service operation is, naturally, one of the aspects with which a pharmacist will be chiefly concerned.

The method adopted by Westons is simple. The customer is served by an assistant at the medicines counter—which, as already indicated, is immediately adjacent to the dispensary. The assistant then rings up the price of the purchases on a cash register and places the price slip together with the goods in a polythene bag which is then heat-sealed on a foot-operated machine attached to the counter. Payment is made at one of the two check-out points in the normal way.

For the rest, it is self-service all the way—and the branch has currently on its shelves more than 150 kinds of merchandise carrying cut price offers.

The sales area consists of three gangways. The left-hand side of the first aisle is dominated by an extensive range of

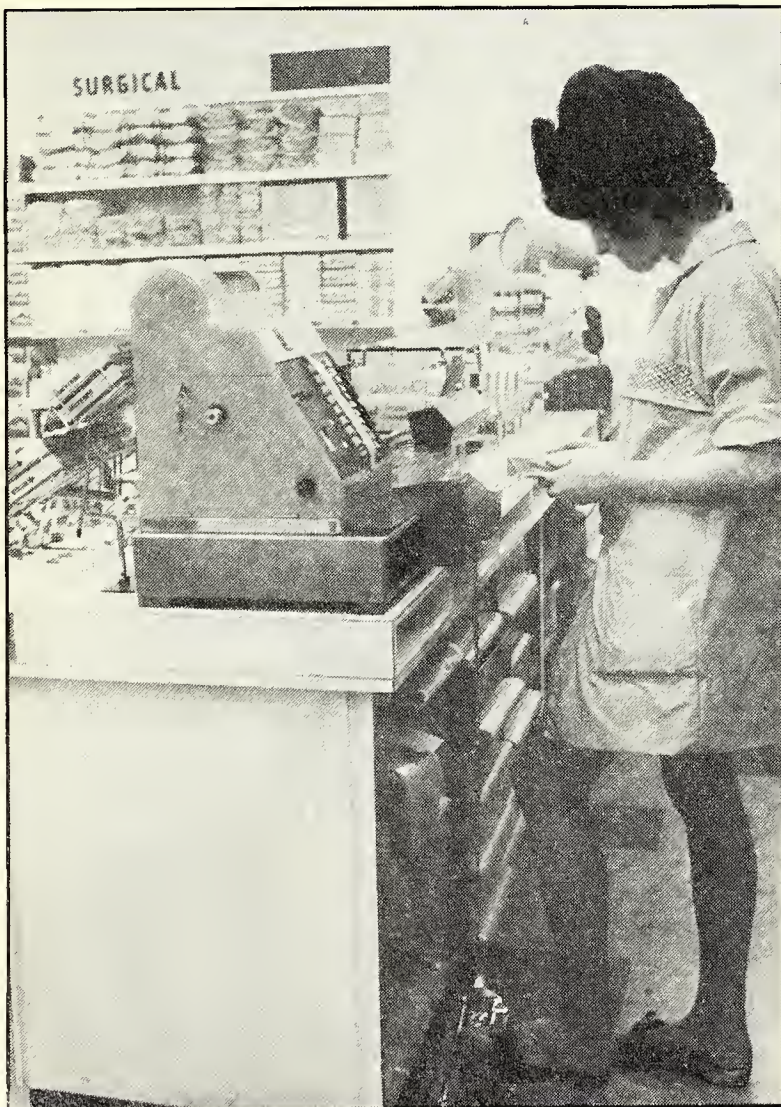

health foods, of which a special feature is made in this unit. Facing them are baby foods, a home brewing section, surgical goods and foot aids. The dispensary is immediately facing the top of this gangway.

Turning, and walking down the second aisle towards the check-out points, the left-hand side is occupied by toiletries, dental care products and cosmetics. On the right is a men's toiletries section followed by more cosmetics.

The cosmetics selection extends in terms of price from the budget ranges—such as Miners—to Coty, Max Factor and Yardley products at the upper end.

The third gangway has one of its sides featuring hair care products and, facing these, paper products, sanitary towels, tights, household goods, disinfectants and pet foods.

The second of Weston's self-service units is scheduled to open in Grimsby on September 11, and this should be followed before the end of the year by others at Farnham in Hampshire and Scunthorpe in Lincolnshire.

An assistant operates the heat-sealing machine on the medicines counter. Prices of goods are rung-up before sealing

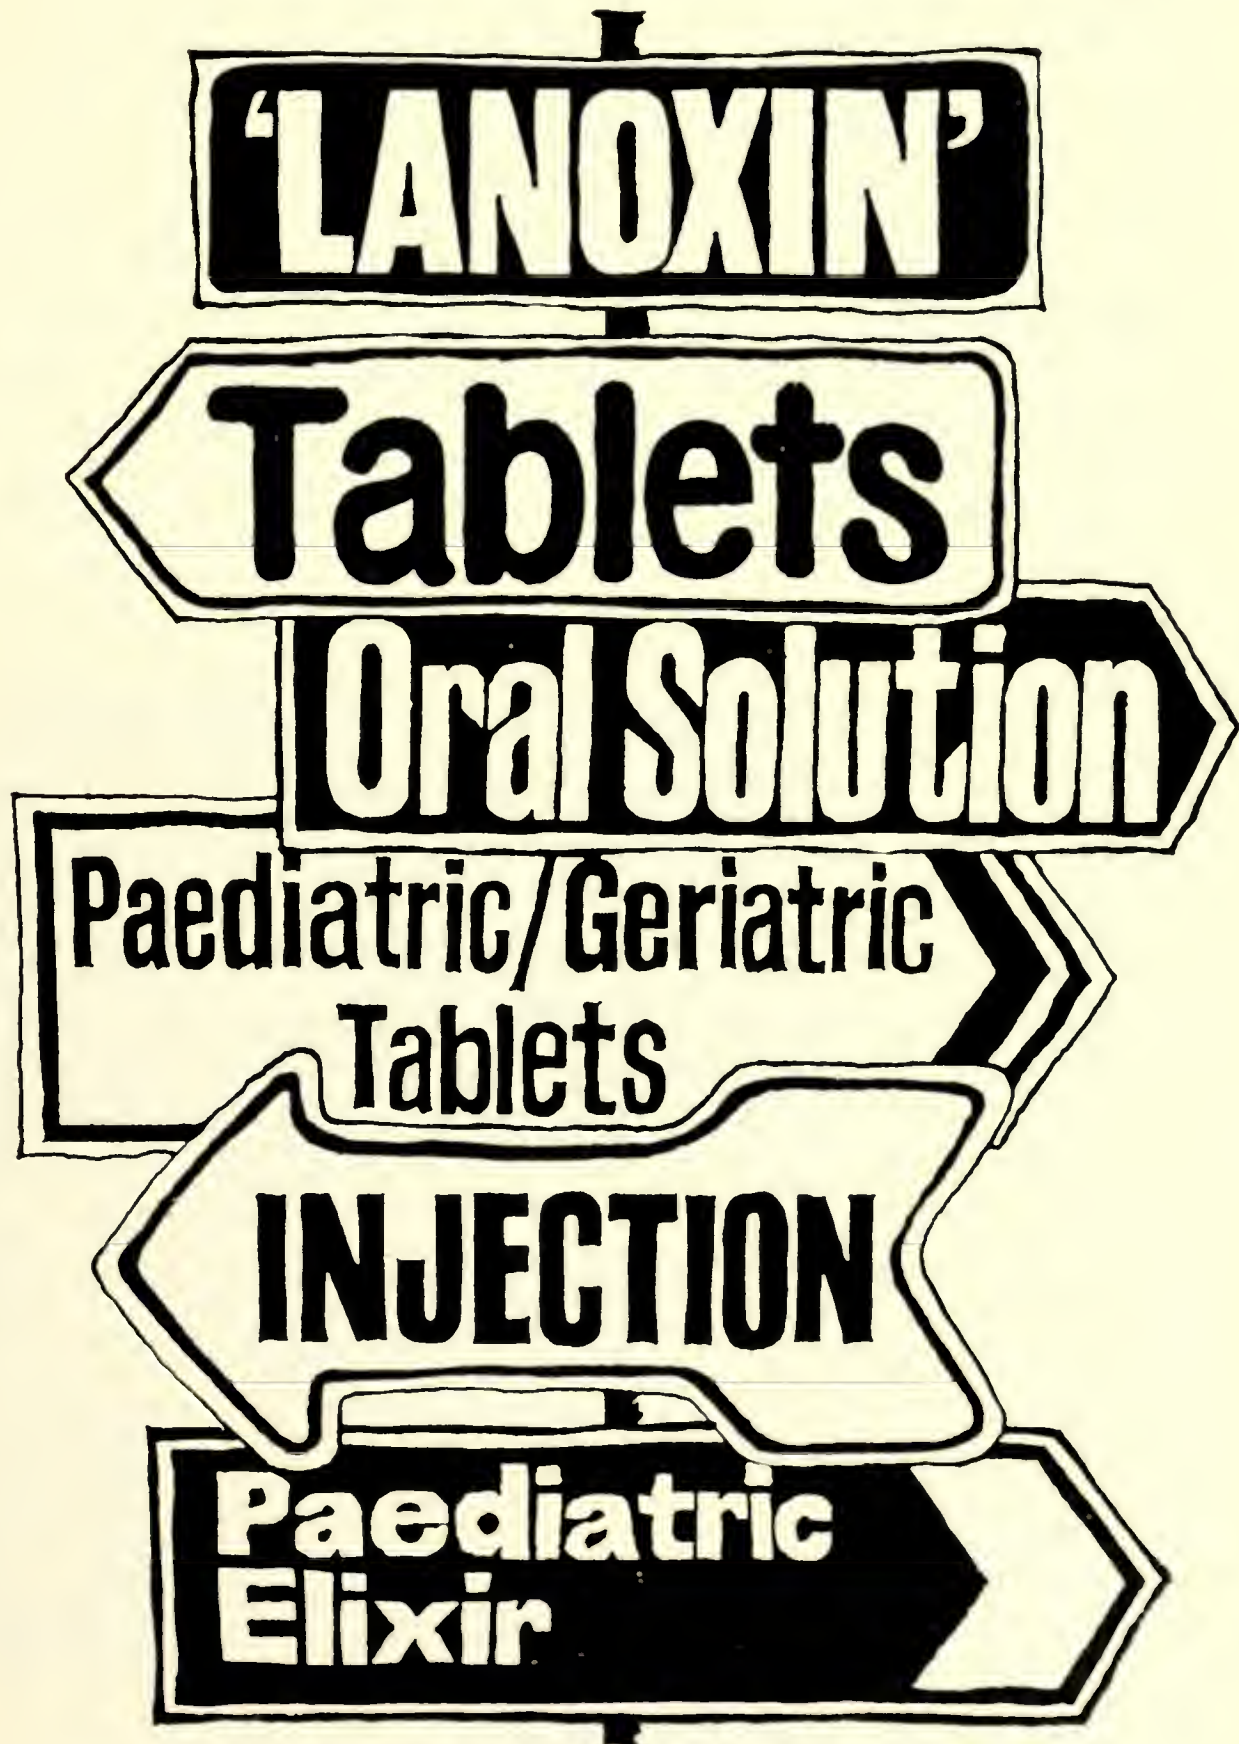

This view from the doorway looking past the check-out points, shows the contents of the self-service unit

The medicines counter is sited within the immediate supervision area of the dispensary at the rear of the shop

'Lanoxin': whenever digitalis therapy is indicated

Whatever the contingency there is a 'Lanoxin' preparation to meet it. Quality control throughout manufacture ensures pure, precise doses of digoxin in all presentations. 'Lanoxin' Digoxin

Philips photographic packs

The new Flashpack 7

Here's the latest version of the famous Flashpack. Each holds 48 PFC4 (192 flashes), 80 PF1B, 50 AG1B Super. The PFC4's are packed in two card dispensers with 8 x 3 cube packs in each (24 cubes, 96 flashes). Great feature of these sturdy packs is the gravity feed system which makes for quick, efficient handling of individual cubes, cuts out frustrating fiddle! Use your gravity feed dispenser on your counter or fix it to the wall with its own self-adhesive wall mounting.

Each Flashpack 7 holds our usual handy dispenser with a supply of leaflets giving hints on flashlight photography.

The Halogen Projector Pack

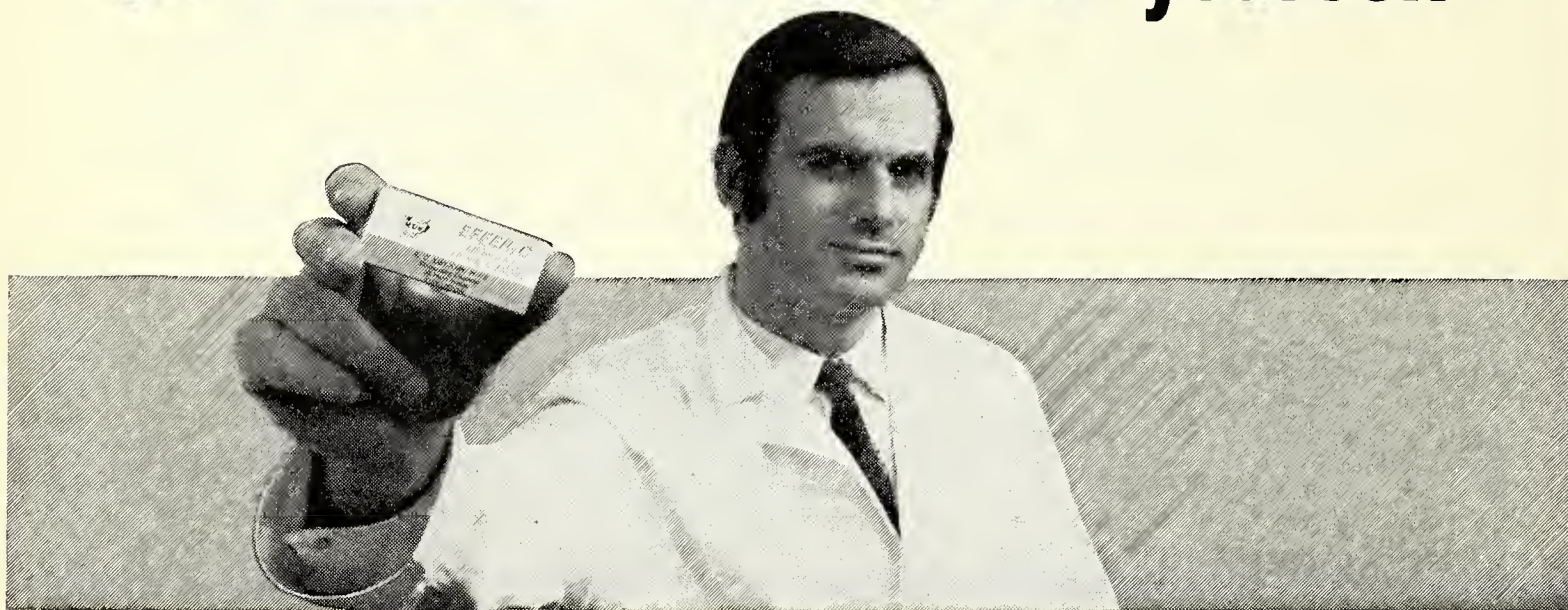

Every Halogen Projector Pack contains a clear, plastic Handipack with eight tungsten-halogen lamps stowed neatly inside—four A1 215's and four A1 216's.

These fit over 80 popular types of cine and slide projector. You'll find the Handipack ideal for display either as a counter unit or as a wall unit using any number of Handipacks locked neatly together with their own special interlocking sides. And when you've sold all your Philips Halogen Projector Lamps you can use your Handipack units for filters, adapters or lenses. Display the lamps in the Handipack and get the best out of sales.

Philips brighten up photography

For coughs, colds, indigestion, tummy upsets, headaches, sore throats—recommend yourself

Are your customers scared of supermarket self-service? Confused by all those varieties of products. When they're feeling a bit off colour they probably want you to recommend something. And if that something is your own brand, with your own name on the pack, they'll be pleased and reassured.

Cox's Chemist's Own Brand scheme allows you to offer this personal service. You can choose your lines from over 50 popular counter products. We will prepare and pack them, put your name, address and brand mark on the carton; give a complete marketing service with point-of-sale aids, and deliver to your door at no extra cost. Perhaps you are not aware that the Cox C.O.B. range covers the majority of today's basic ailments.

Recommend yourself to them—and they'll recommend you too. Interested? Post the coupon below to:

Arthur H. Cox & Co. Ltd.

Brighton 7, Sussex, BN2 3QJ.

Please send me full details of the Cox C.O.B. scheme. I am a practising Retail Pharmacist.

COMMENT COMMENT COMMENT COMMENT COMMENT

The beam in thine own eye

One of the pharmacist's traditional grumbles has been about the illegibility of doctors' prescriptions.

While this has been, and still is, a legitimate grievance—witness the continuing flow of forms submitted for the *C&D*'s Prescription Poser feature — there seems to be growing concern that communications between the chemist and his patient are not all that they might be.

One thing in particular that has come in for criticism is shoddy labelling of dispensed medicines.

This can take a number of forms. Two that have been mentioned recently are the obscuring of warnings on the manufacturer's pack (last week, p 149) and illegible handwriting (August 1, p 137 and this week, p 190).

Our two correspondents on handwritten labels both advocate the use of a typewriter, a plea that we strongly endorse. With the declining emphasis on the "three R's" in education many new entrants to the profession have had no sound basic training in calligraphy. Older members may have grown careless in the use of the pen.

All, with a little training, can come to use a machine which, if kept clean and treated with care, will enable them to produce labels that the patient can read.

For those who insist on continuing to write out labels by hand the advice given in the "Art of Dispensing" formerly published by the *C&D* still applies. The aims should be neatness, distinctness and simplicity. The writing should fill, without overcrowding, the space provided.

Each pharmacist contributes, through his fees to the Pharmaceutical Society, to the salary of a public relations officer. The work of that officer can be vitiated by careless labelling, for the customer's only criterion of the quality of a medicine and the care that has gone into its dispensing is its outward appearance.

Above all the production of a legible label is just as much a professional responsibility as is ensuring the quality and correctness of the medicine dispensed.

Pound-foolish merchandising

"Money-off" promotions have been the subject of correspondence and comment in the *C&D* recently. Contributors have questioned the validity of specific examples of "bait" selling. The rights or wrongs of individual cases may be discussed at length without conclusion—or, for that matter, inducing profit.

We would like to set aside for the moment these specific

arguments and follow the line of thought on the subject that is pointed in the Retail Trading-Standards Association's current *Bulletin*. It raises a question that is fundamental to the practice of anyone concerned in retailing.

The relevant paragraph, contained in a leading article on "bait" selling, runs:

"Another bait which does less than credit to the reputations of quite a number of manufacturers and retailers is in connection with so-called 'recommended prices.' Too often these are highly inflated by the manufacturer of branded products so that the retailer, without departing from his standard mark-up, can offer goods to the public at what can be claimed to be tremendous reductions off the list price. This is fraudulent trading, and we appeal to all our retail members to challenge those manufacturers who provide 'recommended prices' which are set unreasonably high in order to provide a means within the law of deceiving shoppers."

Those are very strong words. Indeed, had they come from any source but the RTSA, there would be a temptation to reply: "That's a pretty sweeping allegation: give us chapter and verse."

The fact is that the RTSA (a body conceived within retailing and brought into the world by the industry itself) has shown time and again—not infrequently in courts of law—that it is perfectly prepared to back its assertions with the most closely documented evidence.

It would be foolish to ignore the RTSA's warning in this matter, for any manufacturer who makes a practice of offering inflated "recommended prices" is giving his customers a rod for their own backs.

To see the truth of this we have only to recall the early days of trading stamps in this country. When these stamps had a novelty and scarcity value they appeared to offer untold benefit to the retailer—and far too many were inclined to disregard the warnings that were given at the time. The result we see only too clearly today: treble and quadruple stamps on offer. The magic selling aid has become just another cost-element in a transaction.

The same will assuredly happen with the artificial price-cutting that is encouraged by too-high "recommended" prices. Well-chosen and genuine promotions can, as we all know, prove valuable merchandising tools. But unless a price-cut carries *value* to the purchaser it is meaningless.

Any trader who allows himself to become involved in an artificial cost/price structure is doing both himself and his customers a grave disservice.

BOOKS

Ingredient X—The Production of Effective Drugs. L. C. Schroeter. Pergamon Press Ltd, Headington Hill Hall, Oxford. 8 x 5½ in. Pp viii + 157. 70s.

The bearing of excipients and other formulation additives on a drug's performance, shelf life and acceptability to the

patient are here considered (in reverse order) by an author whose whole working life has been spent in development research. He takes into his reckoning the container (its effectiveness in protecting; its risks of reacting) and such factors as consistency (in creams and syrups), degree of ingredient purity, coatings, ingredients added for identification, atmospheric oxidation and speed of release.

His enthusiasm comes through in a first chapter on R & D, but his language throughout is clear, simple and free from

jargon. Some of his chapter headings ("Who decides the taste?" "Alas, the colour is gone") might suggest he was addressing a general-public readership, and laymen can certainly feel they understand the text. Fellow professionals will concede that he handles their problems in a way that is informed, fair, perhaps even ego-boosting.

World Patent Law and Practice, First Supplement. J. W. Baxter. Sweet & Maxwell Ltd, 11 New Fetter Lane, London EC 4. 9 x 5½ in. Pp 42. 20s.

LETTERS

Plea for legibility

May I add my opinion to that of Mr H. J. Reynolds (August 1, page 137) that labels on dispensed medicines should never be handwritten. No handwritten label has left my hospital pharmaceutical department for nearly 10 years and none ever will again.

There seem to be two main obstacles to the widespread adoption of the typewriter as universal equipment on the dispensing bench.

It is thought that one needs to be a skilled typist to produce good labels. This is not so; within a surprisingly short time, new staff who say they "cannot type" are able to type labels at least as fast as they use a ball point pen. The results look as if they had been done by a professional.

It is thought that a special typewriter is necessary and this is expensive. Four typewriters are in use in my department, all of different makes and none has any special provision for holding labels. (We have labels printed in perforated sheets like postage stamps.)

The typewriter mentioned by Mr Reynolds costs about £50, I believe, and is excellent, but Boots sell a model costing less than £25 and in a busy dispensary two might well be necessary. (Why do Boots' branches not type labels?)

Bad handwriting is not a joke; can I plead with you to drop your Prescription Poser feature in which readers are invited to try to read terrible handwriting? Would we like it if the *British Medical Journal* reproduced illegible chemists' labels and invited their readers to try to decipher them?

E. R. Tallett,

Group Pharmacist,

Burnley General Hospital

[See Comment, page 189—Editor].

NP labelling

With reference to your report headed "Patients told, ask for NP" (August 8, page 149) it would be better if the patient who complained about "As directed" asked his or her doctor to put some directions on the script, for the pharmacist to put on the label, instead of just NP — as they are required by law to do for some drugs.

When I get a script with NP only, I label it "To be taken as directed by your doctor." This throws it back in the doctor's lap, and in some cases has had the required effect.

I hope someone of authority has replied to this article in *Which?* and that it will be published with the same prominence as the original article.

H. Crook,

Dumfries

Toothpaste claims

In your issue of August 1 (page 125) you published a report on a decision by the Food and Drug Administration in the United States to withdraw approval of

the new drug applications from a number of dentifrices on the grounds of lack of proof for their claims, including effectiveness against tooth decay.

In the case of Kolynos fluoride toothpaste we should like it to be known that the product sold in the United Kingdom under the same brand name, and exported from there, is made to a different formula and has been shown to be effective in protecting tooth enamel from acid attack. The fluoride ion has been well stabilised and remains active during long storage and the formulation is the subject of a British Patent.

Taking the waters

I thought this incident was worth recounting now that the general public have become so knowledgeable about medicines generally.

The water in the local baths contains a fair share of chlorine.

I overheard two girls coming from the baths. The first one said: "That water tastes horrible. There must be peroxide in it."

The other answered: "It is not peroxide but it is full of chlorodyne."

GELATIN IN THE DRUG AND

by M. Leiner, BSc, MBA (Production director P. Leiner & Sons Ltd.)

The demand for all kinds of gelatin shows rapid growth each year, the growth rate in the pharmaceutical sector being the greatest.

The prices of all types of gelatin are, of course, steadily increasing, reflecting the rising cost of raw materials, labour, services, etc — the rate currently averaging between 10 and 15 per cent a year.

Gelatin is derived from collagen, the main constituent of bones, skins and connective tissues. Each of the raw materials gives a different type of gelatin with distinctive physical and chemical properties.

When bone is the raw material, it must be completely free from flesh, grease and marrow. For this reason, most of the bone used comes from India and Pakistan where enormous numbers of "holy" cattle roam and eventually die natural deaths in the desert. The skeletons are bleached and degreased by the natural action of sunlight and rain.

With the crushed bones, the first phase of the transformation takes place in tanks containing dilute hydrochloric acid which removes the calcium and leaves the bone

matrix known as "ossein." The calcium is recovered as di-calcium phosphate by-product and is sold for use in cattle-feed and fertilisers. The ossein is carefully washed to remove all traces of acid and then transferred to pits containing a lime suspension where it is left for up to ninety days. During this period, hydrolysis of the collagen takes place and it is converted into gelatin.

There are certain differences in the early stages between the treatment of bones and skin, but both can be prepared for the final extraction process by a liming or acid hydrolysis, depending on the type of gelatin required.

The extraction of the gelatin takes place in large stainless steel tanks containing water at a controlled temperature. Several extractions are made using a higher temperature every time. Each extract is a separate "grade" of gelatin with distinctive characteristics.

The dilute solution of gelatin extracted from the ossein is then filtered through cellulose pulp filters to remove any impurities. Removal of salts by ion exchange can also be effected at this stage. Next, the gelatin solution passes to an evaporating plant for concentration. The concentrated solution is chilled and

allowed to gel on a refrigerated drum or belt. The resulting gelatin film is ground and then dried with hot air.

Each batch of dry gelatin is tested and graded in the laboratory before being powdered, screened and blended to meet the customer's specifications. Throughout the whole operation, the gelatin is subject to purity and bacteriological control.

Pharmaceutical gelatin

Gelatin was first used as a means of encapsulating medicaments during the nineteenth century by Mothes in France (1833) and Murdock in London (1848). From those early days when capsule preparation was an art, it has now progressed to a skilled science using sophisticated mechanical methods producing millions of capsules per day. To operate successfully intricate large-scale, automatic equipment, set to meet close tolerances, it is necessary to use gelatin conforming to exact specifications.

Besides being made in a variety of shapes, colours and sizes, depending on the particular medicament and the dosage to be dispensed, capsules can also be treated to regulate the rate and duration of release in the body.

The rate of release of the contents from a gelatin capsule, of course, depends, in the main, upon the rate of the disintegration of the capsule wall in the surrounding medium. Gelatin may be cross-linked by aldehydes, resulting in products of increased melting points and lower degrees of swelling in aqueous environments.

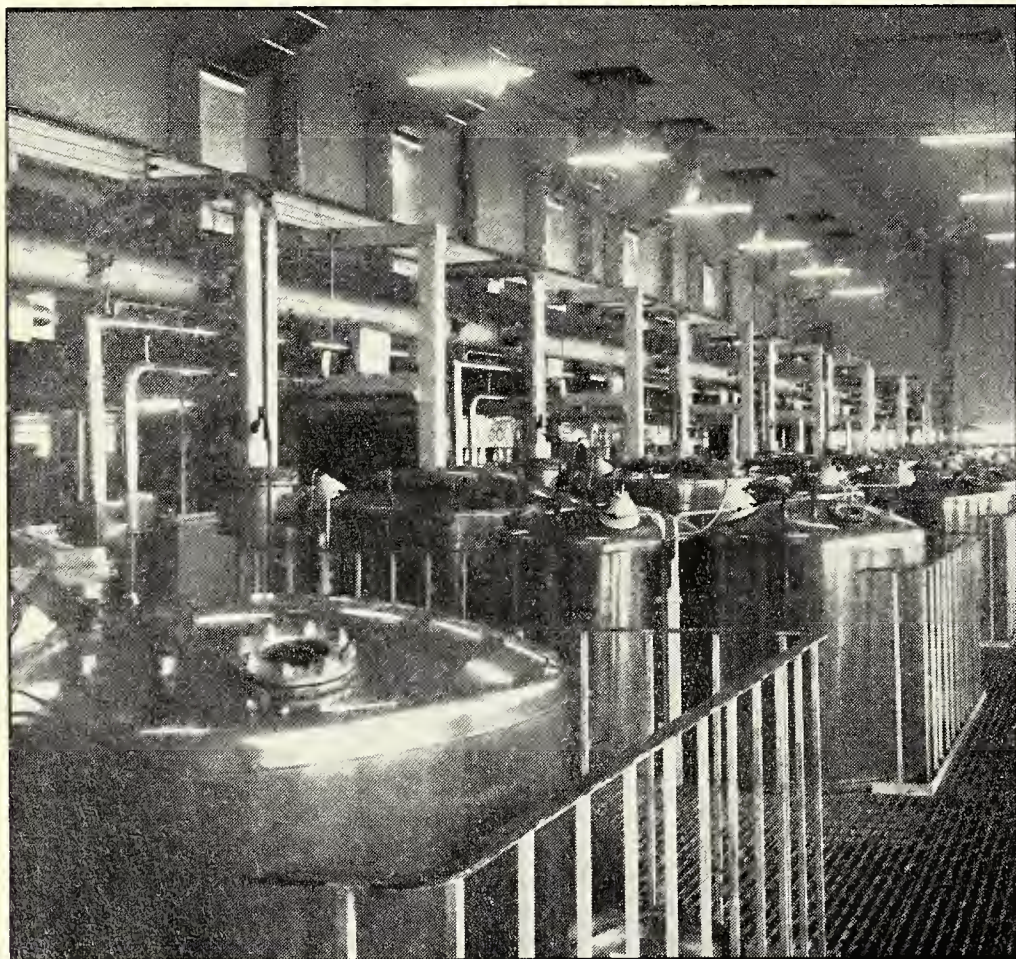

The texture of a capsule is dependent upon the amount of plasticiser incorporated. Hard, telescopic, two-piece capsules are usually composed of gelatin alone, whilst the soft shell variety can contain up to 40 per cent plasticiser (usually glycerin).

Gelatin microcapsules are produced by the encapsulation of water-insoluble liquids or solids which are capable of forming emulsions or suspensions respectively.

The gelatin is caused to coacervate, forming a protective film around the individual oil droplet or suspended particle. The formation of the gelatin coacervate is normally brought about by either salting it out from the system, or by the addition to the system of a second water-soluble colloid carrying an electric charge opposite in sign to that carried by the gelatin. This may be a water-soluble gum or a second gelatin.

Oil soluble or suspendable vitamins, flavours, enzymes and other materials may be afforded the protection of a gelatin film by this procedure.

The main physical parameters governing the selection of a gelatin for capsule manufacture are gel strength (bloom) and viscosity. These determine its ability to form films of the desired consistency.

The evaporator section of P. Leiner & Sons Ltd's gelatin plant at Treforest. The company are the largest producers of pharmaceutical gelatin in the world, having additional plant in Brazil and India and raw material processing plants in India, Pakistan, the Lebanon and Nigeria

PHOTOGRAPHIC INDUSTRIES

Gelatin for soft shell capsules must be compatible with plasticisers and have the desired degree of adhesion.

The colour and clarity of a gelatin are often important when certain capsules are made. These properties are achieved by finely-controlled filtration techniques and ion-exchange processes. The reduction of metal contents to very low limits is another feature of ion exchange.

Because the majority of both hard and soft shell capsules are coloured it is essential to use gelatin which will not react with those dyestuffs sensitive to traces of oxidising and reducing agents, otherwise the desired colours will not be achieved.

All gelatin must have a very low bacterial count together with complete absence of pathogenic and proteolytic

organisms. Good organoleptic properties are also desirable.

Pharmaceutical gelatins are manufactured by accurately controlling the depolymerisation of the protein collagen to ensure the correct physical properties, ion-exchange performs the desired chemical refinement and maintenance of stringent hygienic conditions achieves the bacteriological standards.

The present annual world consumption of gelatin for capsule manufacture is estimated at 15,000 tons, including the process of microencapsulation which involves the coating of minute particles, some as small as 1/25,000 in.

An approximate division of the three types would be: Hard shell 8,000 tons; soft shell 5,000 tons; microencapsulation 2,000 tons.

A further 500 tons is used in a variety of minor applications ranging from tablet manufacture to colloidal dispersion and surgical sponges.

Photographic gelatin

Gelatin finds use in the photographic industry as the carrier of and protective colloid for the light-sensitive silver halide crystals in the so-called photographic emulsions.

The gelatin contributes to a control of the crystal size and to the speed, contrast and other properties of the photographic product.

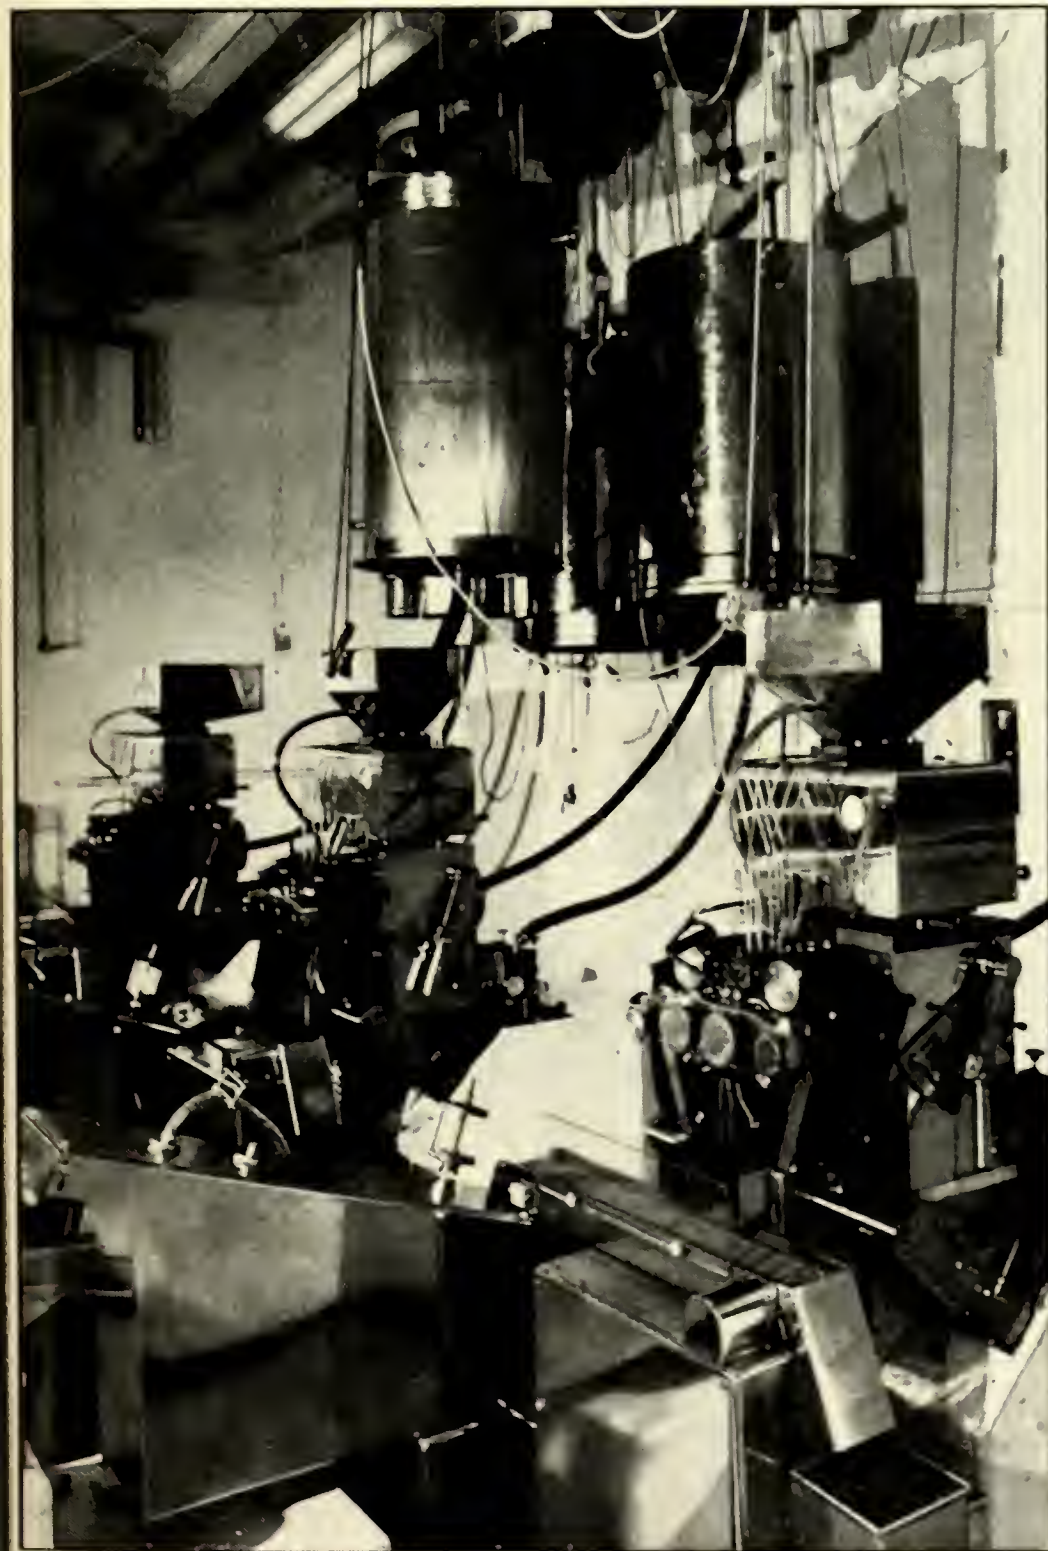

Accordingly, photographic gelatin is produced to cover a wide range of activity — from the inert types, which contribute little or no speed to the photographic emulsion, to the active types which intrinsically sensitise the silver halide crystals.

Gelatin also finds use in ancillary fields, such as the carrier for barytes in the pre-coating of photographic papers and as a protective layer, coated over the emulsion layer on a film base to afford protection from abrasion etc.

The gelatin, in this instance, is normally subjected to "hardening" by aldehyde cross-linking.

The use in the photographic industry of gelatin, essentially a polymer of amino acids of incompletely known sequence, has instigated a great deal of investigatory work with the ultimate object of its replacement by synthetic hydrophilic polymers of regular, predeterminable chemical structure.

This would, ideally, afford the emulsion maker a completely inert support for the precipitated silver halide crystals, capable of a regular and uniformly repeatable response to added sensitising agents. Partial replacement of gelatin has been successful by polymerised and co-polymerised vinyl monomers but complete replacement of the natural colloid does not yet seem to be feasible on a commercial or technical basis.

Machines for producing and filling soft gelatin capsules in operation at P. Leiner & Sons plant in Trelorest. Besides producing capsules here and in Italy, the company's encapsulation division manufacture and sell machinery for producing and filling soft-shell capsules

PROFESSIONAL NEWS

Pharmaceutical Society
of Great Britain

Plans approved for new Society HQ

The Pharmaceutical Society has received detailed planning permission for a possible headquarters building at Lambeth.

The Society's Council were told at the August meeting that the granting of detailed planning permission completed the formalities for putting that site in readiness for development. If and when it was decided that the Society should move to Lambeth, detailed plans of the building would be presented to the Council and amended as necessary.

The Society's planning application for development of its Bloomsbury site had been "called in" by the Minister of Housing on the grounds that it might conflict with the National Library scheme development. That meant that the Minister himself, rather than the local authority concerned, would make a decision on the matter.

The Minister of Public Building and Works, replying to a letter from the Society pointing out the problems it was faced with in the matter, had said that he was sympathetic to its request for an early decision on the Government's intentions towards the Bloomsbury site. However, complex issues were involved and the Minister said it was likely to be some little time before he would be in a position to reply fully.

The dangerous structure notice on 17 Bloomsbury Square had been withdrawn, the secretary and registrar (Mr D. F. Lewis) reported, but the Society's building would be inspected by the Greater London Council to see that it complied with the London Building Acts.

The president (Mr W. M. Darling) reported that Mr Norman Fowler, Conservative Member of Parliament for Nottingham South, had agreed to act as a Parliamentary adviser to the Society. The appointment would be in addition to that of Mr Eric Ogden.

Following a resolution, passed at the Branch Representatives' meeting on May 21, the Council has agreed that the closing date for acceptance of nominations for the Council elections should be brought forward from March 31 to February 28 and that voting papers should continue to be dispatched on or about April 18. Appropriate amendments to the by-laws giving effect to the recommendations were approved.

A recommendation by the Finance and General Purposes Committee that a grant of £1,000 be made from the Emergency Fund to be applied at the discretion of the Council of the Pharmaceutical Society of Northern Ireland for the benefit of pharmacists who suffered losses as a result of civil disturbances, was approved.

The Practice Committee reported that the National Pharmaceutical Union and the Central NHS (Chemist Contractors)

Committee had accepted an invitation to meet representatives of the Council to consider the setting up of a working party on the NHS contract along the lines envisaged in the resolution passed at the Branch Representatives' meeting in May.

It was agreed that a revised scale of fees for private prescriptions should be produced in the autumn.

The Science Committee considered it unfortunate that a manufacturer could vary the composition of a plastics container without reference to his customers. The Committee was informed that the matter in so far as it affected pharmaceutical preparations had been referred to the Standing Pharmaceutical Advisory Committee of the Department of Health.

It was decided that a postgraduate school on "Radiopharmaceutical preparations" should be held at the School of Pharmacy, University of London in April 1972.

State-aided postgraduate instruction

The Committee received a letter from the Department of Health indicating that amending regulations would be made to the Health and Welfare Services (Provision of Instruction) Regulations adding pharmacists to the list of specified classes for which the Secretary of State was able to provide courses. No details are yet available, but the letter said they would be getting in touch again when they were in a better position to indicate the probable timetable.

The Committee was reminded that it was proposed that, at the outset, three prototype courses should be run in England and one course in Wales. The Scottish Department was in touch with the Scottish Home and Health Department on the question of similar courses in Scotland. It was recommended that the Organisation Committee should be asked to consider the detailed arrangements for the first prototype courses to be organised through three regional committees in England and one in Wales.

It was reported that a meeting of the joint Pharmaceutical Society/British Medical Association working party on dispensing in rural areas was shortly to be held. A meeting of a second working party, to discuss matters of concern to the two professions other than dispensing in rural areas would be held on August 19.

It was suggested that as the Royal College of Veterinary Surgeons and the British Veterinary Association were both represented on the joint Veterinary/Pharmaceutical Committee, the National Pharmaceutical Union should be represented on the Committee as well as the Society.

Discussions had continued with the BMA and the Committee on Safety of Drugs to devise suitable wording for a card to be handed out by pharmacists to patients for whom they dispensed medicines containing monoamine oxidase inhibitors. The discussions were at an advanced stage and it was reported that full details of the cards and of how they would be distributed would be given as soon as possible.

The possibility of standard labelling indicating the need to observe precautions with flammable dispensed medicines for external use was also being considered. The question of warnings on other medicines was being discussed with other bodies.

BUSINESS Q & A

I own the freehold of my pharmacy. I propose to sell it and shall probably make a capital gain. I understand that I can choose to have my liability calculated on the basis of comparing what I receive with the value at April 6, 1965. How is this value estimated?

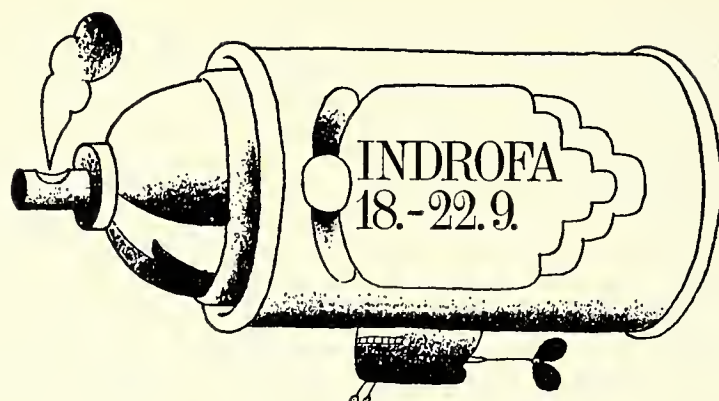

The value to be taken is the open market value of the property at the 6th April, 1965. Normally this would be estimated by reference to the rent for similar properties at that time. Once ascertained the rent would be capitalised. For example, if the rent at that time is ascertained to be £1,000, and a yield of 10 per cent is expected, the value would be $10 \times \frac{£1,000}{100} = £10,000$. For a formal valuation you should consult a surveyor who will have special knowledge of these problems.

I have some old items of photographic stocks. I understand that stocks are to be valued at cost or market value. I doubt whether many of these items have a market value. Am I justified in ignoring them for stocktaking purposes?

If there is genuine doubt as to whether these items have a market you are justified in ignoring them. If any of them are sold subsequently, they will be included in your takings at full selling price and will represent pure profit subject to trading expenses.

I own some shares which have fallen in value. At the same time, they are basically sound. I have owned these shares for some years and have now been advised to buy some more to average the cost so that I can make a profit if they rise and I sell them in a few months time. What is the likely capital gains effect?

Unfortunately the most recent purchase, if not owned for a full year will be liable to income tax and surtax on the profit earned and a capital loss would be sustained on the earlier shares. You would not be able to set off the capital loss against the short term gain.

MARKET NEWS

Paying for the pay rises

London, August 12: There comes a time when increased costs cannot be met by increased productivity and the extra must be passed on to the consumer. That point has now been reached by at least one manufacturer of opiates who has announced higher schedules with immediate effect. Morphine sulphate is up from £112 7s to £117 19s per kg and codeine phosphate from £93 to £97 13s per kg. Other manufacturers are expected to follow the lead since they too have had to bear increased costs from higher wages, etc. The opiates have been subject to many price rises in the past year or so but, say the makers, the rises took into consideration only the higher cost of raw opium. On this occasion the rise is not attributable to the raw material. Pholcodine is also higher by about 5 per cent. Some vitamins, in particular ascorbic acid and thiamine hydrochloride, are expected to be advanced in the next few weeks.

In crude drugs gentian, witch hazel leaves and sarsaparilla were dearer. Facing new crop offers in the near future holders quoted lower rates for Indian lycopodium, Canadian senega and Costa Rican ipecacuanha.

Essential oils showed little change on the week. Lemongrass for shipment was down by one shilling kg.

Pharmaceutical chemicals

Adrenalin: (Per g). Synthetic 1-kg lots, 1s 2d; 500 g 1s 4d acid tartrate, 1 kg 10½d, 500 g 1s.

INFORMATION FOR MANUFACTURERS

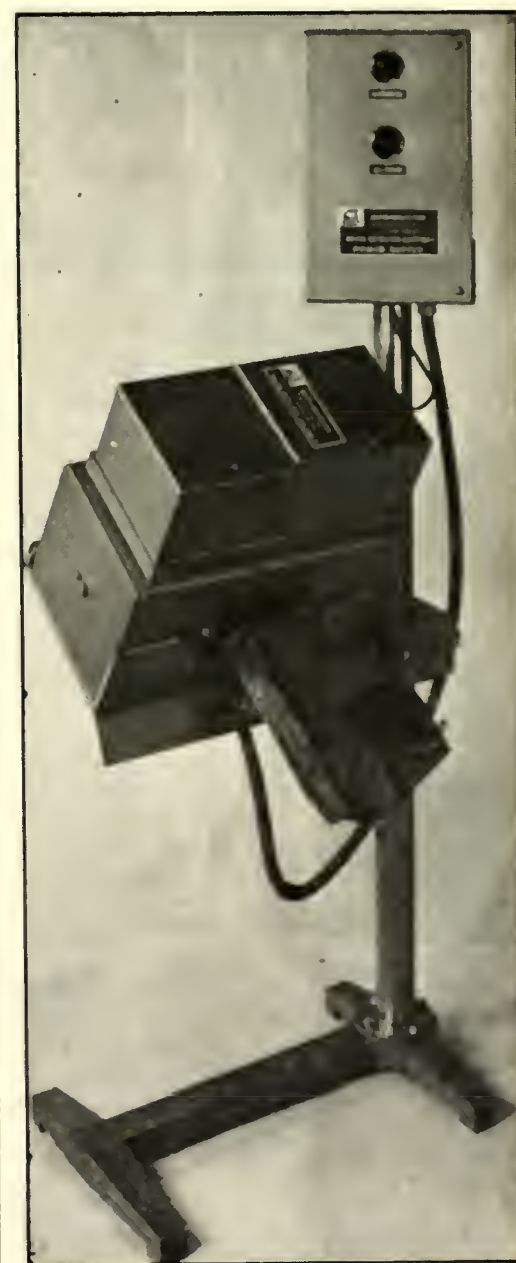

Automatic rejection of metals

The Metalchek 7X metal detector of A. M. Lock & Co Ltd is now available as a complete unit with stand and automatic rejection system. It is reported to have satisfactorily completed extensive performance and reliability trials by a number of the world's leading pharmaceutical manufacturers.

The detection aperture size of 3 in wide by ½ in high will check more than 5,000 tablets per minute as they leave the press, automatically rejecting any contaminated with any ferrous or non-ferrous metal including stainless steel.

The Metalchek 7X will detect smaller than a 0.4 mm particle of stainless steel and particles of even smaller diameter of other metals.

Price complete with stand and rejection mechanism is £375, delivery normally takes two to three weeks (A. M. Lock & Co Ltd, 79 Union Street, Oldham, Lancs.)

Equipment

Water purifier for hire

Elgastat 2000 is a fully automatic deioniser producing purified water to any desired quality from 0.5 megohm for laboratory industry to approaching theoretical H₂O for medicine and fundamental research.

Although available for outright purchase (£190) it is intended primarily for hire. Rental is based on the number of exchangeable De-i cylinders required per month. A minimum of two cylinders will produce up to 8,000 gallons at a rental of £45 per month. (Elga Products Ltd, Lane End, High Wycombe, Bucks.)

Portable de-ioniser

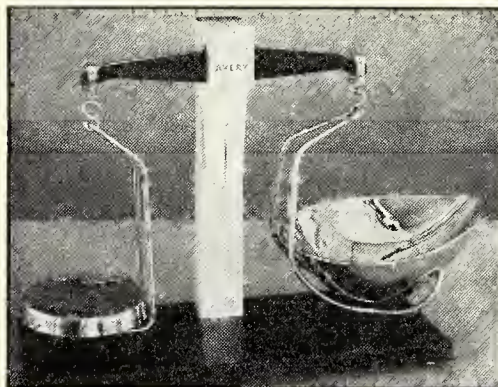

The Permutit Co Ltd have developed a light-weight portable de-ioniser, the Mk 17 (£26) claimed to provide B.P. quality water at the turn of a tap. The unit, which will hang or stand, incorporates a single polythene cartridge of mixed bed type ion exchange resins. Replacement cartridges cost £9. A conductivity meter is fitted. Flow rate is up to 26 gal per hour. (The Permutit Co Ltd, 632 London Road, Isleworth, Middlesex.)

Self-levelling balance

W & T Avery have designed a sensitive beam scale "specifically for weighing expensive chemicals and drugs." With a capacity of 1 kg the Avery 2031 machine has a sensitivity of 100 mg.

A self-levelling indicating system allows the machine to be used in "reasonable"

out-of-level conditions. Both round and pear-shaped goods fittings are available (W & T Avery Ltd, Soho Foundry, Birmingham 15.)

COMING EVENTS

Advance information

National Pharmaceutical Union, Overcliff Hotel, Manor Road, Westcliff, Essex on September 20. Area meeting of pharmacist members from Norfolk, Suffolk and Essex.

British Society of Flavourists, Bonnington Hotel, Southampton Row, London WC1 on November 17. Inaugural meeting. Those intending to be present should inform Mr R. S. Collins, 27 The Paddocks, Bugbrooke, Northampton 3QR NN7.

Powtech 71, Harrogate, Yorks, May 12-14, 1971. Exhibition and conference devoted to powders and bulk granular solids. Exhibition organisers: Specialist Exhibitions Ltd, 64 High Street, Croydon, CR9 2UH. Conference organisers: Powtech 71, Powder Advisory Centre, 1 Eldon Square, Newcastle upon Tyne NE1 7JG.

Shopex 71, Earls Court, London, SW 5, May 17-21, 1971. Formerly known as Shopshow. Details from The Organiser, Shopex 71, Iliffe Exhibitions Ltd, Dorset House, Stamford Street, London SE 1.

Society for Drug Research, Bames Hall, 1 Wimpole Street, London W1, November 25. One day symposium: "Prostaglandins: their possible physiological, pathological and therapeutic roles." Contributors will include: Dr M. F. Cuthbert (London), Dr K. E. Eakins (USA), Professor E. W. Horton (Edinburgh), Dr S. M. M. Karim (Uganda), Professor V. R. Pickles (Cardiff), Dr M. Sandler (London), Dr J. R. Smythies (Edinburgh) and Professor J. R. Vane (London). Fee for non-members, 30s. Further information and programme (when available) from Dr Alma B. Simmonds, Chelsea College, University of London, Manresa Road, London, SW 3.

North-west Region, Pharmaceutical Society, Owens Park University Halls of Residence, Wilmslow Road, Fallowfield, Manchester, at 10.45 am on September 6. Regional conference. Morning: Mr J. P. Kerr (a member of Council on "A planned pharmaceutical service;" Mr J. Craig (Boots Ltd) on "Future trends in design policy." Afternoon: open forum. Speakers include Professor P. H. Elworthy (Manchester University); Dr W. R. L. Brown (St Bartholomews Hospital), Mr W. A. Beanland (a member of Council) and Mr G. Price (Geigy (UK) Ltd). Fee: full-day with lunch £1 5s; full day without lunch 12s 6d; morning/afternoon only with lunch 18s 6d. Details from Mr C. Mellor, 28 Denby Lane, Heaton Chapel, Stockport, Ches.

Agricultural and Veterinary Group, Pharmaceutical Society of Great Britain, University of Aston in Birmingham, September 26-28. Course on marketing. Limited number of vacancies, details from Group secretary, 17 Bloomsbury Square, London WC1. At the National Agricultural Centre, Stoneleigh, Warwicks, on October 13, autumn meeting.

make sure they get it from you!

Leather is the new range of men's toiletries that's directly aimed at the big spenders.

Aimed at the people for whom only perfection is good enough.

Top-bracket readers of **Reader's Digest**, **Daily Telegraph**, **Observer**, **Queen**, **Nova** and **She** will see a lot of full colour advertisements for Leather and they'll respond as only the extravagantly well-to-do can.

They'll dig deep into their very deep pockets for talc that retails at 22 -, soap that costs 27 6 and after-shave or hairdressing that sets them back 33 -.

They'll buy *Leather*—for expensive men

Leather - perfect male toiletries available only from
Cussons Sons & Co. Ltd., Kersal Vale, Manchester M7 0GL.
